

Mission Statement UAS Technikum Wien

Technology, business and personal skills

We are a technical institution of higher learning and we educate people in engineering degree programs. We place great emphasis on combining technical content with subjects focusing on business and personal development as well as on refining our educational offerings in order to increase their level of quality and broaden their international scope.

Theory and practical application

Our teaching and learning processes are oriented towards the latest scientific findings as well as the current and future requirements for practical application in professional settings. The combination of theory and practical application is also the highest priority in the institution's research activities. In this way, we create value and utility – for people, for society and for the economy.

Diversity in instruction and learning

We encourage an academic culture in which independent and active learning plays a key role. Our teaching and learning processes offer our students the opportunity to better themselves. We see the diversity of our students as a source of enrichment and account for it using a wide range of didactic methods. We support our students to learn and further their education in different living situations.

Shaping the future with research

As a research-oriented institution of higher learning, we work towards the development of knowledge. The exchange between research and instruction plays a crucial role here. We aim to contribute to the development of innovations through scientific creativity in the course of partnerships with other academic institutions, business and industry at the national and international level as well as through the intense transfer of technology and knowledge.

By people for people

Instruction and research are social, interactive processes that are designed by people for people. Their knowledge and expertise make a special contribution to the success of our institution. It is important to us to foster a sense of solidarity among our staff, faculty, students and graduates. Accordingly, we place great emphasis on ensuring that people treat one another in a trusting and respectful way. We cultivate an open, dialogue-oriented culture of communication and respect and promote equal opportunity and diversity. Our pursuit of quality and an international positioning for our institution helps to make UAS Technikum Wien more attractive for the future to both potential students and companies.
